DMV DATA VERIFICATION

Third-party database
checks in real time

Find out instantly if the ID you're scanning was actually issued by the state on the ID. **IDScan.net's DMV Data Verification** service queries DMV records in real time, and instantly tells you whether or not the state issued the ID you have scanned. It checks for the combination of ID number, name, date of birth, and address.

Participating States

38 states, along with the District of Columbia, make their DMV records available, and more states are planning to participate. **66%** of the country's population lives in the participating states.
